

Study programmes: PhD studies – Mathematics – Analysis and differential equations			
Course name: 3M156 Theory of distributions			
Lecturers: Miloš Arsenović			
Status: Optional			
ECTS: 9			
Attendance prerequisites: Functional analysis			
Course aims: Mastering of notions and methods of the theory of distributions.			
Course outcome: Student should understand and be able to apply notions and techniques of the theory of distributions.			
Course content: Basic notions of theory of distributions. Sobolev spaces. Boundary value problems for linear elliptic PDE.			
Literature:			
1. W. Rudin: Functional Analysis			
2. B. Jovanović, Parcijalne i integralne jednačine, Zavod za udžbenike Beograd, 2010.			
Number of hours: 10	Lectures: 4	Research: 6	
Teaching and learning methods: Frontal / Individual / Research			
Assessment (maximal 100 points)			
Course assignments	Points	Final exam	points
Lectures		Written exam	
Exercises / Tutorials	50	Oral exam	50
Colloquia		Written-oral exam	
Essay / Project
